Cristina Nunes is Senior Scientist at the Portuguese Institute Sea and Atmosphere (IPMA). For the past 20 years, she's been developing work in biology and ecology applied to the fisheries of marine small pelagic fish (SPFs), with expertise in histological/microscopical analyses and in the areas of reproduction and bioenergetic aspects of marine organisms. She's since 2008 IPMA's scientific co-coordinator of Daily Egg Production Methods (DEPM) surveys applied to sardine and horse-mackerel in Iberian waters, and coordinator of the research work and stock assessment of Atlantic chub mackerel. She is member of several ICES WGs related to SPF surveys and the provision of reproductive biological parameters.
